Part Surfer

*Reducing Engineering
Search Time
Significantly*

PartSurfer allows users to search results and drill down for additional information on a part related to its item number or description. It allows you to save time and increase accuracy while finding and researching parts throughout your organization. It also delivers immediate results which allows employees to focus on being more productive and efficient rather than searching after information all over your ERPs' database.

The PartSurfer Interface system is a turnkey system designed to consolidate commonly used part information in one screen, allowing engineering and manufacturing personnel to quickly find all the information they need. It is built on Microsoft's .Net development platform.

Having PartSurfer essentially means employees will have all information right under their finger tips and therefore can answer any questions regarding a customers order instantly.

The PartSurfer interface system is a single application with the following functions:

Part Search and Data Display

(Read-Only Application)

Product Functionality

The Part Search component of PartSurfer provides users with powerful search capabilities to find the parts they are looking for. It is designed to fit into your ERP system seamlessly. This will allow engineering to quickly navigate up and down the product structure.

Your engineering team can search your ERP database without tying up IT resources. This intuitive interface means engineers and designers do not need to spend hours going through multiple ERP screens which are designed for a multiplicity of different departments.

Pressing go will populate the Search Results tab. Double clicking on any of the parts listed in the Search Results will populate the Data Display fields with the data for this part.

Part Number

Transaction History

Components

Open Orders

Where Used

Routing

Inventory

Data Display

Data Display retrieves commonly required fields and lists from your ERP databases and populates the PartSurfer form with the data.

Information will include tabs for the following information:

Where used parts
Component parts
Open orders
Open requirements

Data Display will also populate the following fields:

Cost	First Operation Work Center
Stock Qty	WIP Qty
Allocated Qty	Leadtime
ROP	ROQ
Revision Level	Drawing number
Notes	Product Code

Fields can be added to this list provided they are readily available from your ERP.

Excel Export

Any of the data in the datagrids can be exported to Excel by clicking on the 'Excel' icon. A new Excel spreadsheet will be opened and the complete datagrid is copied to the new spreadsheet, allowing for further manipulation, saving or printing out.

View drawing capability

job	suffix	stat	qty_released	qty_complete	start-date	end-date	root-item	root-description
MC00009016	2	R	1.00	0.00	3/9/2009	3/9/2009	2009016	TM15/TB725XS MOBILE ROCKBREAKER VEHICLE
MC00009021	2	R	1.00	0.00	4/6/2009	4/8/2009	2009021	DS16-II/TB335 MOBILE SCALER VEHICLE

Features

- ∅ The single best interface for finding and reusing parts
- ∅ Where Used, Transaction History and PO history
- ∅ Advanced search function includes Multi-level BOM searches as well as search by component part
- ∅ Display Drawing button will show you latest drawing for this part
- ∅ Export to Excel Button saves all information to an Excel spreadsheet for use in presentations or emails.
