# ConfigLink

Extend the Power of your Epicor Configurator to your CAD Systems

ConfigLink allows the user to push ERP configuration parameters to parametrically configure 3D models and produce 3D images and drawings of configured product.

ConfigLink empowers sales teams to produce their own 3D models based on customer requirements.

Users can immediately export and share results with the customers. Create quotations with embedded images, allowing your customer to see and sign off on a 3D image of the product. Free up engineering resources by minimizing redundant CAD model modification. Streamline your production process by outputting accurate, detailed drawings and other files necessary for your CAM software.

With ConfigLink, you will see significant improvements in sales numbers, quoting time, accuracy and quality of quotes, customer satisfaction, and production cycle with reductions in engineering cost, late shipments, and shop floor errors.

Powerful Sales Tool

Equip your sales team with CAD and engineering expertise for reduced sales quoting time and faster quote turnaround. Quote more and win more.

Generate 3D Model On The Go

Empower sales teams to build their own 3D models based on customer requirements from your Epicor Configurator. ConfigLink automatically inserts the 3D image of the configured product for more visual and compelling quotations to your client.
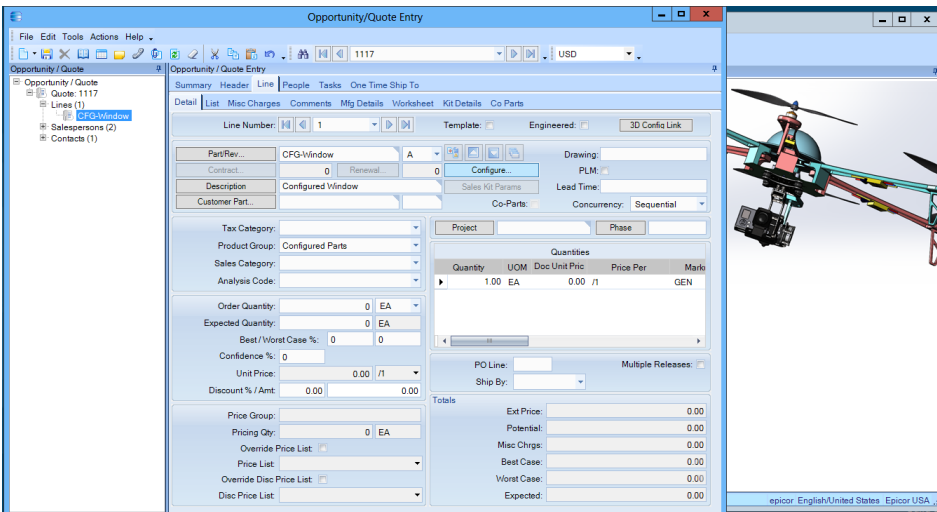

Win More Sales

Export the 3D image to PDF format to share with the customer. Include the customer in the loop to minimize broken-telephone order entry errors—seeing is believing! Stand out from your competitors, let your client see and sign off on an actual 3D product image.

Direct CAD Integration

ConfigLink configures and makes dimensional changes from your Epicor Configurator automatically to free your engineers from redundant CAD model modifications. It works with your existing CAD suite of your choice.

Manufacturing Benefits

Automatically create DWG, DXF, or PDF files to drive downstream production process. It is able to create files that are ready for process by your production CAM software.

Less Rework

Direct integration with your Epicor ensures complete configuration can be saved as quoted and engineered, ready for production. Production benefits by receiving accurate, detailed drawings.

Direct Integration To Your Epicor Configurator

Works with your existing Epicor Configurator — no new training required. Order information is kept in the ERP database — no additional database required.

Optional Module: ConfigLink On-The-Web

Easily integrate ConfigLink Web module with your existing website for self-configuration of simple and complex product. ConfigLink Web module provides a highly flexible and robust configuration environment to customers, distributors, and sales people. The easy to use interface allows users to independently build and price configurable products.

Quote Anywhere, Anytime

ConfigLink Web module configures your CAD model in a web browser from your mobile devices anywhere, anytime. ConfigLink Web module builds 3D PDF views using the CAD suite of your choice. ConfigLink Web module alsvo enables customers to build 3D model from web browser for their maximum convenience.
