

# NEST LINK

**EPICOR**  
Platinum ISV Partner

Real time, bi-directional, and fully automated nesting job integration for Epicor

## Benefits

- Eliminate manual data entry of nesting work orders
- Shop floor sees new nesting requirements in real-time
- Accurate capture of material usage written back to Epicor jobs
- Automated background process with no day to day human interaction
- Secure integration using Epicor business objects/REST API

## Partners & Integrations

## Features

- Creates new work orders in your nesting software based on Epicor job requirements
- Creates and update your nesting tool parts library with new part records and part geometry files
- Updates Epicor Job BOMs with nesting cutting results once the parts are cut
- Update Epicor raw material inventory with material usage
- Synchronize sheet inventory and remnants between your nesting software and Epicor
- Compatible with Epicor lot tracking & Advanced UOM module

# NESTLINK

## 1. Synchronize nesting software sheet stock library

If your nesting tool has a sheet stock library, NestLink will keep the sheet stock library synchronized with your Epicor. New sheets received in Epicor are automatically created in the nesting tool. NestLink will update quantity on hand for sheets consumed by the nest.

## 2. Create nesting software part records

NestLink will create new parts based on the Epicor job requirements and part information. If part geometry can be found, NestLink will also upload the geometry to the part record.

## 3. Create new nesting work orders

When a new job is scheduled and ready for production in Epicor, NESTLink automatically checks the part method to find materials that need to be nested and creates new work orders in your nesting tool, matching the job requirements.

## 4. Update Epicor bill of material

After parts are nested and cut, NESTLink automatically updates the Epicor Job BOM issuing the material, quantities and labor on the job and closing out nesting operations if required.
